Proactive Laboratory Animal Allergy Surveillance and Education (ProLASE)

Becky Langer, PhD
Baylor College of Medicine
Baylor College of Medicine (BCM)

- Private medical school located in the Texas Medical Center
  - 1000 acre complex with 46 independent institutions

- BCM Family
  - 1832 faculty members
  - 1398 students
  - 786 post-doctoral fellows

- Total research support is $302 million
Center for Comparative Medicine (CCM)

- 8 animal housing facilities
  - One of the nation’s largest mouse facilities (35,000 cage capacity)
    - 35,000 X 5 mice/cage = 175,000 mice

- 135 employees

- Animals housed
  - Rodents (mice, rats, guinea pigs)
  - Dogs, Cats
  - Sheep, pigs, rabbits
  - Non-human primates
Lab Animal Allergies (LAA)

- 90,000 – 125,000 workers exposed to lab animals each workday
  - 11-44% of those will develop LAA

- Conjunctivitis, rhinitis, urticaria, and asthma
  - Occurs through inhalation or skin contact

- Significance
  - AAALAC, BMBL, NIOSH
Mouse Urinary Protein (MUP)

- Predominant mouse allergen
  - Attaches to small (3.3 – 10 µm) particles that deposit in the respiratory tract
- Produced by the liver and is excreted primarily via urine
  - Hormonally controlled
- Acceptable levels
  - >5 ng/m³ = increased development of LAA
  - >3 ng/m³ = sensitization for LAA
### Sampling Locations

</table>
Air Samples

- Collected according to industry standard
  - SKC® SURE-SEAL, 37 mm leak free air sampling cassettes
  - 1.0 µm PTFE filters
  - SKC® universal PCXR8 air pumps
  - 120 minutes at a rate of 2L/min

- Captured proteins are eluted
  - PBS/0.5% Tween 20 and stored at -20°C until analysis

- MUP ELISA kit (Indoor Biotechnologies)
  - All samples ran in triplicate and averaged
Preliminary Results (ABSA 2007)

- Elevated levels of MUP were present in dirty cage wash areas

- Allergies (possibly attributed to lab animals) were underreported at BCM

- Significant correlation for development of allergies that were worst at work related to:
  - Failure to wear a mask
  - Working in the facility > 1 year
  - Vietnamese descent
## Face Masks/Respirators

<table>

</tbody>
</table>
Proactive Laboratory Animal Allergy Surveillance and Education (ProLASE)

- Annually assess facilities for the presence of MUP.
- Recruit volunteers from the animal husbandry program to undergo MUP specific allergy skin tests.
- Provide education to individuals working in the animal facilities.
  - Targeted education for individuals involved in animals husbandry
  - General education for research personnel

Failure to Perform Preventative Maintenance!!

Quantity of Mouse Urinary Protein (MUP) in Facility B Dirty Cage Wash

MUP Concentrations (ng/m3)

2006

2007

Failure to Perform Preventative Maintenance!!
Conclusions

- Elevated levels of MUP are present in dirty cage wash areas on a continuing basis
  - *Engineering controls work extremely well in rooms, corridors, suites*
  - *Dumping of cages in open bins needs to cease*
  - *Pre-filters and filters must be changed at regular intervals.*
Mouse Allergy Skin Tests

- Recruit 50 volunteers from CCM employees
  - Volunteers received a $10 gift card to BCM cafeteria
- Complete updated survey that included 4 additional questions
- Visit allergy clinic for mouse allergen skin test

Volunteer #9

- Reported the following symptoms
  - Watery/itchy eyes
  - Runny or stuffy nose
  - Difficulty swallowing/chest tightness
  - Excessive mucous production
  - Frequent colds
  - Skin problems

- Previously diagnosed with allergies and takes medication on/off

- Recently developed symptoms while at work

- Reported symptoms to
  - Supervisor
  - Coworkers
  - OHP
Targeted Education

Post literature on site in the animal facilities

- Emphasize importance of LAA
- Significance of early detection
- Need for appropriate PPE
- Symptoms of LAA
- How to report symptoms to OHP
General Education

- Lunch & Learn Seminars
  - Tecniplast sponsored webinar “Managing the challenges of Lab Animal Allergy”

- BCM now requires “animal handling” physicals
  - Annually for animal husbandry staff, every 3 years for researchers
  - Allergy literature distributed at time of physical
Conclusions

- Lab Animal Allergy awareness has increased
  - *Masks are required for animal husbandry staff*
    - *Not N95 respirators*
  - *OHP clearance is now required*

- Involvement in a LAA program cannot be voluntary
  - *Should employers proactively screen individuals to assure those with severe mouse allergies are not working with mice*
    - *Prevent workman’s compensation claims*
    - *Lessen the effect of missed work time*
Rodent Bedding and MUP

- Bedding samples obtained from Harlan

- Mice were housed for 8 days with each bedding material
  - 9 cages with 2 mice each

- Dirty bedding collected and subjected to simulated cage dumping

- Air samples collected and analyzed by MUP ELISA
  - Dirty bedding OD - clean bedding OD = released MUP
The “MUPinator”

- Bedding placed in “MUPinator”
- Shake for 30 seconds
- Air samples collected for 2 min
Bedding Samples

- Corn Cob*
- Soft Cob
- Aspen SaniChip
- Aspen Shredded
- Omega-dri
- Pelleted Paper
- Diamond Soft
- Tek Fresh
- Isopad
# MUP Release from Bedding

*The higher the OD value, the more MUP that was released from the bedding. OD value for clean bedding (each individual type of bedding) was subtracted from the OD value for dirty bedding.*
