

Biosafety and Biosecurity month of October

Help create a *Culture of Safety* during the Biosafety and Biosecurity month of October.

Don't trick yourself with false sense of protection, but treat yourself well by following good laboratory practices!

- Practice biosafety by wearing your *personal protective equipment* (PPE)
- Gloves,
 - Laboratory coat,
 - Eye protection, as needed
 - Respiratory protection, as needed.
- Practice *hand hygiene* after handling biohazardous materials, before leaving the lab, and before using the restroom.

Visit the *Biosafety Program* on October 24th in the Guggenheim Pavilion to get biosafety guidance and to pick up biosafety swag.

Wash your hands for 30 seconds.

Look for weekly laboratory biosafety tips from the Biosafety Program during the Biosafety and Biosecurity month.

During October, the *Biosafety Program* will emphasize laboratory biosafety training, stewardship and engagement, fostering positive relationships with our biomedical research community, and promoting responsible and ethical conduct of life sciences research.
